## Motivation

## Challenges

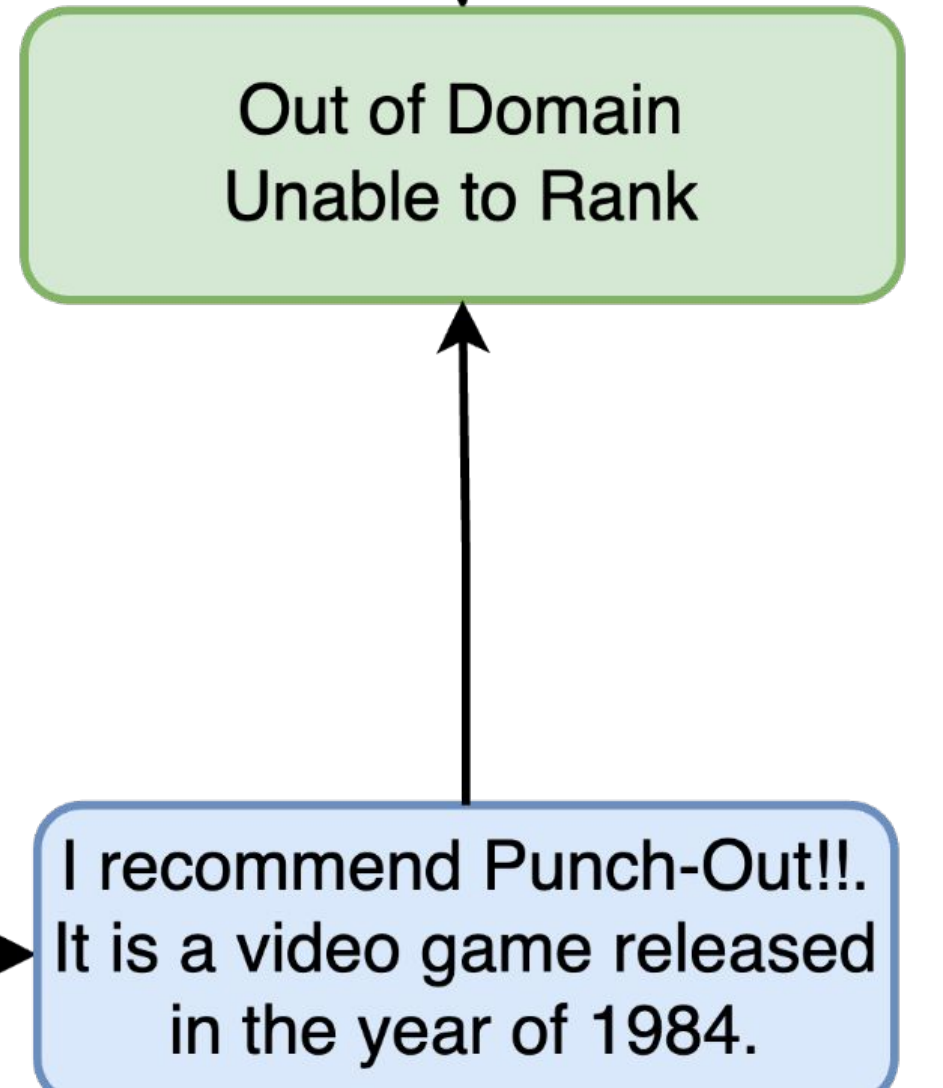

(1) Limited Prompt Length

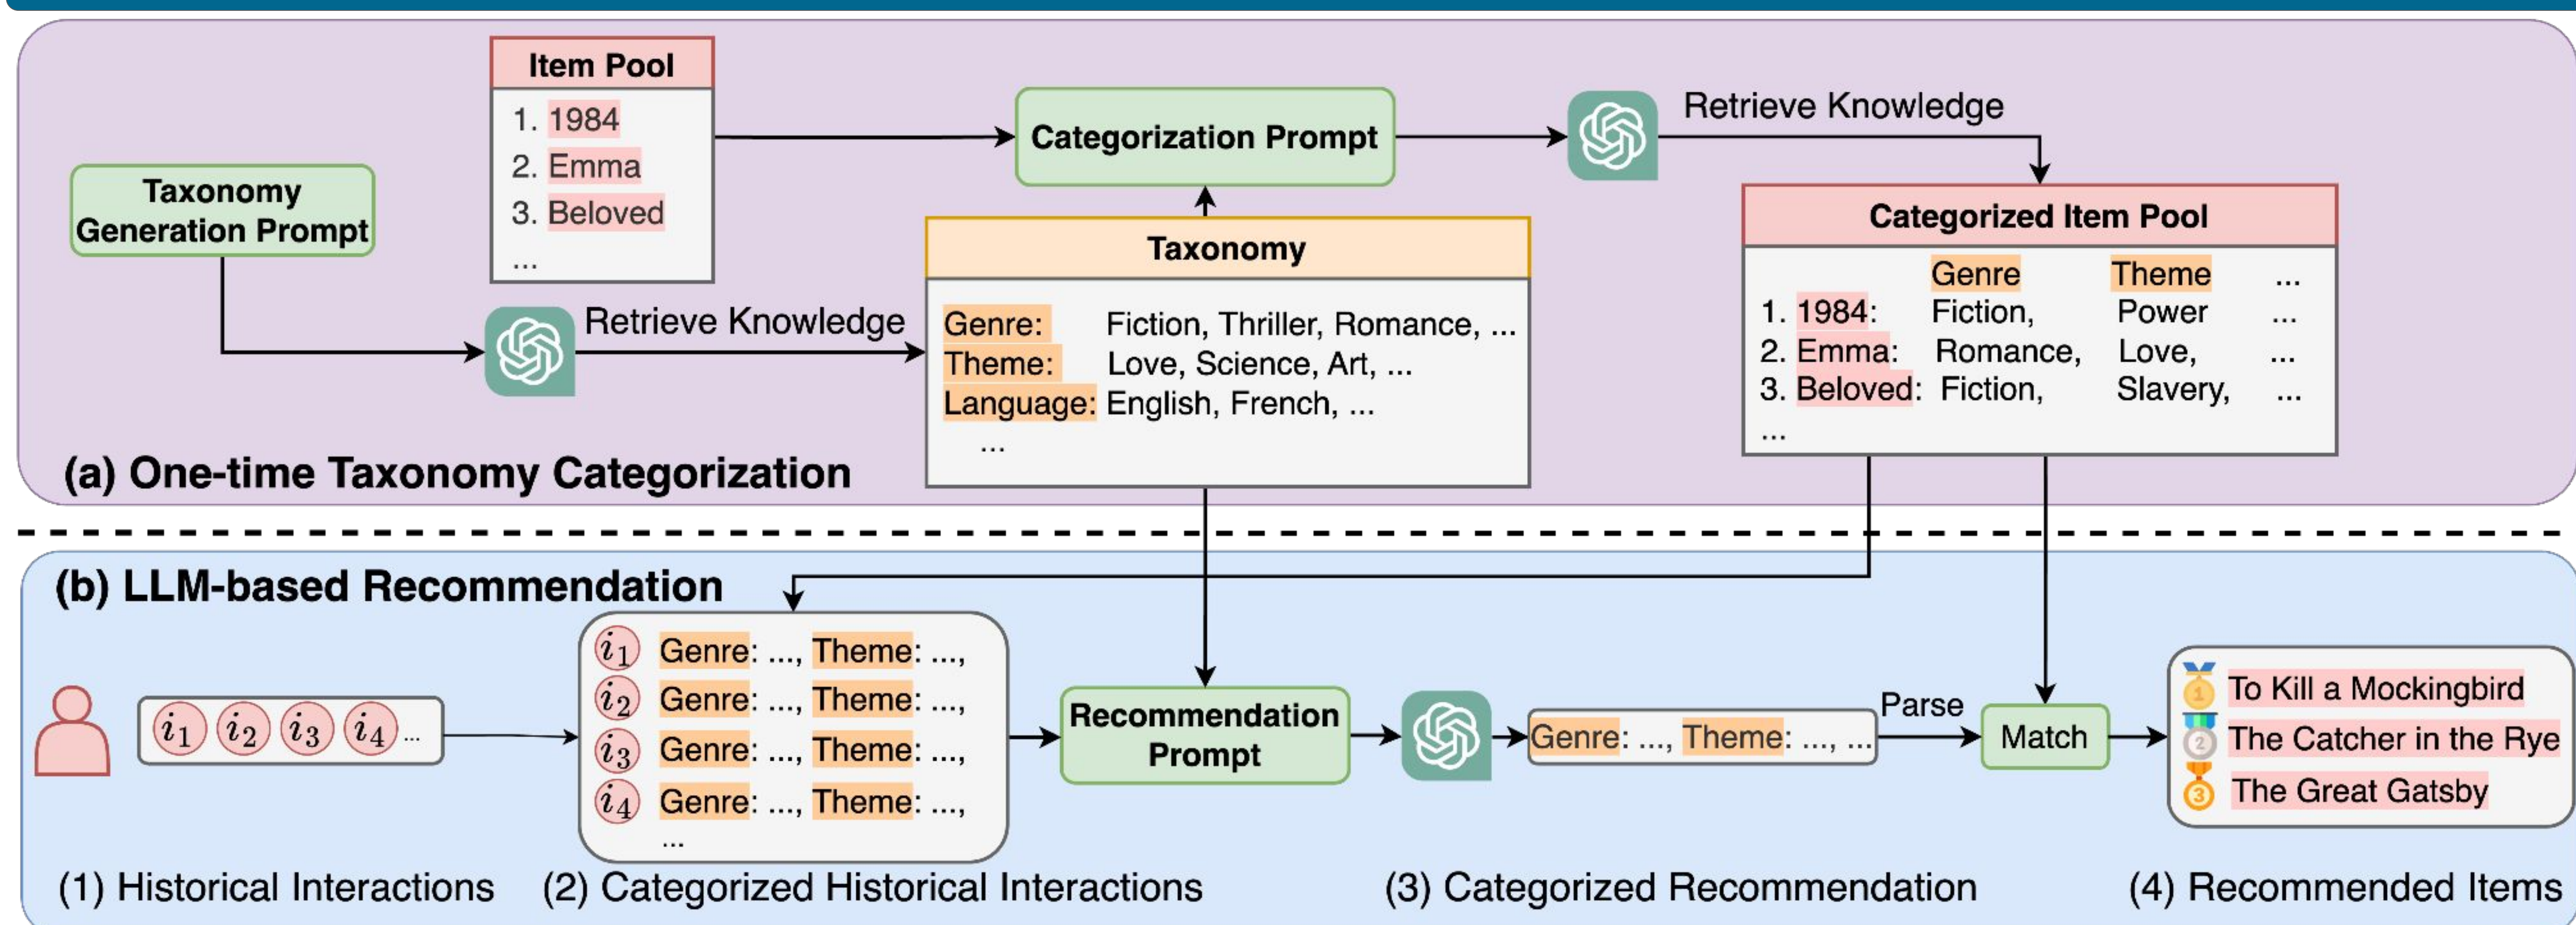

(3) Unconstrained Generation

(2) Vague Item Title

1984: Year?  
Dunkerque: Place?  
Emma: People?  
Her: Pronoun?

## Proposed Method: TaxRec

## Contributions

- ❖ We propose **TaxRec**, a taxonomy-guided method to retrieve LLM's knowledge and enhance LLM's ability as personal recommenders.
- ❖ By systematically categorizing and organizing items through a taxonomy framework, we address the key challenges faced by LLM-based recommendation systems.
- ❖ Experiments show significant improvements of TaxRec over current zero-shot recommenders, proving the effectiveness of our proposed taxonomy-guided method.

### Parameter Analysis - # Features in Taxonomy

- ❖ More features lead to better performance.
- ❖ However, excessive features may introduce noise which lead to performance reduction.

### Parameter Analysis - Matching Score Method

- ❖ Learning-based method (BERT embedding) performs poorly on both datasets.
- ❖ Rule-based methods are better suited to TAXREC.
